---	------------	---	-----	------	-----	-------------	-------------	------------	-----	---

***FPS:** Frames per seconds - the amount of frames recorded per second at the time of capture.

All clips have a playback frame-rate of 24 fps. However we often shoot at a higher frame-rate (e.g. 100 frames per second) to produce a slow motion effect - the higher the captured fps the more pronounced the slow motion effect will be. This effect can add scale to clips, making the effect appear larger.
